PROFILE

A software developer with 3+ years of experience, I have a strong foundation in **Core Java**, **Object-Oriented Programming (OOP)**, and **Data Structures and Algorithms (DSA)** for solving complex problems. I specialize in developing **RESTful APIs** and **data pipelines** using **Node.js**, **Express.js**, **PostgreSQL**, **MongoDB**, and **MySQL**, as well as working with **Spring Boot**, **Hibernate**, and **JPA**. I have experience in **microservices architectures**, **data migration pipelines**, **orchestration services**, **Low-Level Design (LLD)**, and **Flutter** development. I am passionate about tackling technical challenges and contributing to impactful projects.

EDUCATION

Indian Institute of Technology, (IIT, Kharagpur) <i>Master of Technology (MTech), Ocean Engineering and Naval Architecture</i>	Kharagpur, India <i>Jan 2020 – Dec 2022</i>
Global Institute of Technology <i>Bachelor of Technology (BTech), Mechanical Engineering</i>	Jaipur, India <i>Jan 2016 – Dec 2020</i>

TECHNICAL SKILLS

Programming Languages: JavaScript, Java, SQL, Dart
Frameworks & Tools: Node.js, Express.js, Spring Boot, Hibernate, JPA, Flutter, RabbitMQ
DevOps: Docker, Git & GitHub, GitHub Actions, Jenkins, AWS, Azure
Databases: PostgreSQL, MongoDB, MySQL, SQLite, Redis
Concepts: Core Java, Object-Oriented Programming (OOP), Data Structures & Algorithms, DBMS, Computer Networks, Microservices Architecture

EMPLOYMENT HISTORY

Skeps <i>Software Developer</i>	Gurugram <i>Jun 2025 – Present</i>
– Designed data migration pipelines for the Data Warehouse and Data Lake services, moving data between MongoDB, MySQL, and the data lake using cursor-based streaming for memory-efficient, large-scale processing. – Developed and maintained orchestrator services (pos_finance, pos_customer, and others) managing end-to-end customer, merchant, and lender flows on the Skeps lending portal using Node.js, Docker, and Azure. – Integrated third-party lending/finance vendors via webhooks, using Redis-based distributed locking to serialize concurrent webhook events per entity and prevent race conditions during state updates. – Set up CI/CD pipelines with GitHub Actions and wrote unit tests using Jest to automate backend service deployments to Azure.	
Cubastion Consulting <i>Senior Associate Consultant</i>	Gurugram <i>Oct 2022 – May 2025</i>
– Led projects and delivered scalable backend microservices and REST APIs for client applications. – Copper & BitGo: Integrated Copper and BitGo with CLST as third-party services for digital asset transactions, using separate microservices with REST APIs and webhooks for secure communication. – CLST: Developed REST APIs using Node.js, Express, and PostgreSQL (Sequelize ORM) within a microservices architecture for modularity and scalability. – Voltas: Built a cross-platform Flutter app with local/push notifications, background services, Sqflite storage, and MapMyIndia integration.	

PROJECTS

- Designed a microservices-based e-commerce platform with independent **User**, **Product**, **Cart**, and **Order** services (Spring Boot), each owning its own database and communicating via REST APIs and **RabbitMQ**.
- Built the **Order Service** to orchestrate order placement by aggregating cart contents and current product prices, computing the final amount, and storing a purchase-time price snapshot per item for historical accuracy.
- Applied **Low-Level Design (LLD)** and **Core Java/OOP** principles (encapsulation, inheritance, polymorphism, SOLID) to enforce clear service boundaries and maintainable domain models.
